

## Tidalfire Development Training – Adobe

# Customising Acrobat using JavaScript

This course will guide you through how to use JavaScript available in Adobe Acrobat to create application level scripts that can make the use of Adobe Acrobat easier and more productive.

### During the course you will

- Create application level JavaScript
- Find out how to use JavaScript to find out information about the application
- Find out how to use JavaScript to find out information about the currently active documents
- Learn about the Console

### Upon completion of the course you will be able to

- Create your own menu items
- Create custom code to use with the above menu items
- Customise the Acrobat Interface by hiding menu items and tool buttons
- Create JavaScript code to allow different actions depending on differences in documents
- Create reusable JavaScript code to enable quicker form development
- Create template documents

### Course Prerequisites

Knowledge of JavaScript is essential (does not need to be Acrobat JavaScript)

### Software Requirements

- Adobe Acrobat Professional
- A text editor (e.g. TextPad (Windows) and TextWrangler (Macintosh))
- Acrobat SDK installed

### Additional Information

Courses can be run on Windows and Macintosh platforms and tailored to meet customers' requirements.

### Course Duration

1 Day
